

Outline of Projects

Places & Projects

Year

- **Sunline Technology (Thailand)**

(March 2025 -
September 2025)

1. Project Name: Core Bank system
Project Purpose: Core Bank system
Team Members: 5
Position: Java Developer (Application Support Engineer)
Overview: Banking and financial system
Programming: Java
Database: PostgreSQL, MySQL, SQL Server
 - Investigated and analyzed production issues in banking systems
 - Supported system operations and batch process monitoring
 - Coordinated with technical teams to troubleshoot application issues
 - Maintained operational documentation and issue tracking
 - Supported database-related investigation and system maintenance
 - Documentation
 - Monitoring batch processing

- **Scapsolutions Co.,Ltd.- Sri Ayudhaya Rd.**

(January 2016-
February 2025)

1. Project Name:
 - TBDAHUB — National Health Security Office (NHSO)
 - REGHOS — NHSO Healthcare Registration SystemProject Purpose:
 - TBDAHUB is a web application for NHSO to provide Tuberculosis.
 - REGHOS is a web application for registration, measurement, and evaluation when a hospital desire to become a healthcare unit center (Hospital) under NHSO policy.Team Members: 10
Position: Java Programmer Analyst
Overview: TBDAHUB: There are 4 main modules for Tuberculosis patient disease data (registration patient, patient follow-up history, dispensation(drug), lab, and result). First, All of the hospital staffs key in data on screen. Otherwise, they are able to import excel data into the system. Each month, the NHSO will verify and recompense for any hospital activities for which patients have already been treated. The compensation depends on the Right's patient and the data in this system.

REGHOS: This is also a web application. In order to become a healthcare service center under the NHSO's policy, hospitals need to enroll/register from the web screen. There are 3 main procedures on the website. Registration process, Approval process, Evaluation process.

Outline of Projects

Programming: JAVA, JSP, JAVASCRIPT(JQUERY), CSS, Bootstrap, spring MVC framework, iReport

Database: Oracle

- Responsibilities:
- Developed and maintained healthcare web applications using Java and Spring MVC
 - Developed frontend modules using JSP, HTML, CSS, Bootstrap, and jQuery
 - Implemented backend business logic and database integration
 - Designed and generated reports using iReport/Jasper
 - Performed unit testing and production support
 - Worked with hospital and healthcare operational workflows
 - Supported data handling and system maintenance activities

2. Project Name: BHCFR — Doctor Fee Reimbursement System

Project Purpose: Providing all doctors' revenue and payment for each month.

Team Members: 10

Position: Java Programmer Analyst, Support as a project owner.

Overview: Web application responsible for doctor revenue calculation and reimbursement processing integrated with Hospital Information Systems (HIS).

Programming: JAVA, JSP, JAVASCRIPT(JQUERY), CSS, Bootstrap, spring MVC framework, iReport, Store Procedure, hibernate framework

Database: SQL Server 2014

- Responsibilities:
- Developed backend modules using Java and Spring MVC
 - Created JSP frontend pages
 - Wrote complex SQL queries and stored procedures
 - Performed database indexing and query optimization
 - Supported data migration and field mapping validation
 - Worked with SQL databases
 - Integrated frontend and backend modules
 - Conducted user support both onsite and on-call
 - Gathered business requirements and supported user training sessions
 - Maintained and handled operational healthcare data
 - Supported production issues and performed troubleshooting for users
 - Designed and generated reports using iReport/Jasper

- Challenges:
- Handling large SQL queries for reporting
 - Supporting legacy systems and production issues
 - Data migration validation across multiple fields
 - Maintaining business-critical hospital systems
 - Improving SQL query performance using indexes

Outline of Projects

3. Project Name: Doctor Profile (Doctor Training Management Module)

Project Purpose: Providing Doctor Profile /Any involve doctor data with hospital.

Team Members: 8

Position: Java Programmer Analyst

Overview: Developed training management functionality within Doctor Profile web application for managing professional medical training and development records.

Programming: JAVA, HTML/ Thymeleaf, JAVASCRIPT(JQUERY), CSS, Bootstrap, spring boot framework, iReport, Store Procedure, JPA framework, Microservice

Database: SQL Server 2017

Responsibilities:

- Developed frontend and backend modules using Spring Boot architecture
- Created HTML/Thymeleaf frontend pages
- Wrote complex SQL queries and stored procedures
- Participated in system analysis, feature design, and implementation
- Supported data migration and field mapping validation
- Troubleshoot production issues and user-reported bugs
- Worked with SQL databases
- Designed and generated reports using iReport/Jasper
- Gathered business requirements and supported user training sessions

• **Mittraphap Pockaphan Co.,Ltd.- Ramkamhaeng Rd.**

**(August 2014-
August 2015)**

1. Project Name: Accounting, Stock Management, and Manufacturing System (In-house System)

Project Purpose: Developed in-house systems for accounting, stock management, and manufacturing processes

Team Members: 2

Position: VB6 programmer

Overview: The application is standalone and runs on Windows. The application is used by the accounting department and the marketing department. The application will provide data and store data in the database. Most of my duty was assigned by the project leader.

Programming: VB6

Database: Firebird

Responsibilities:

- Supported accounting and manufacturing operations through internal systems
- Managed and queried data from Firebird database
- Generated data for reporting and operational usage
- Provided troubleshooting and user support for internal users

Outline of Projects

- **Microsoft Innovation Center (MIC#14) — Microsoft Thailand (Internship Project)**

(March-May 2014)

1. Project Name: Windows Phone 8 Applications
Project Purpose: 1. Just Draw Application - an application for drawing something.
2. Draws The Straws Game Application - an application for helping a group of people to make decisions.
Team Members: 5
Position: Programming as an Internship student
Overview: 1. Just Draw is an application for drawing and painting objects by touchscreen for selecting elements on display.
2. Draws The Straws Game app is a random loser tool. A group of people can play it together. There are many sticks shown on screen. Users can type the number of sticks (It means the number of players). Then, this app will generate short and long sticks from the input. The loser is the one who draws the short straw.
Programming: Visual Studio(C#), Blend for Visual Studio
Database: -
Responsibilities:
 - Developed mobile application features using C#
 - Participated in UI implementation and application testing
 - Worked collaboratively within a development team during internship program

- **Senior Project — Chulalongkorn University**

(2013-2014)

1. Project Name: Story Telling Application for Vision Loss and Blindness People
Project Purpose: Develop application for vision loss and blind people to gain the knowledge and acquire entertainment.
Team Members: 1
Position: Planned, Analysis, Designed, Coding, Unit testing, Document
Overview: Developed a desktop application designed to support visually impaired and blind users in accessing story and book content through keyboard interaction and speech guidance.
Programming: VB2010, Windows 7
Database: MySQL (phpMyAdmin - a free software tool to handle the administration of MySQL over the Web)
Responsibilities:
 - Designed and developed the application independently
 - Implemented speech-assisted navigation features for accessibility
 - Connected application logic with MySQL database
 - Performed system analysis, coding, testing, and documentation
